Skokie SAW AND TOOL COMPANY

SKOKIE HELPS YOU

← **MERCHANDISE FOR PROFIT!**

Selling in today's highly competitive market calls for dynamic merchandising at the retail level. To be effective, it must use precisely the right sales tools. No other manufacturer in the replacement tool industry offers its customers the unique merchandising assistance pioneered by Skokie Saw and Tool Company. Here are the proven-successful selling tools that will help you merchandise for profit:

Complete Line • Quality • New Products
Packaging • Color • Display

SKOKIE SELLS ON SIGHT! SEE OTHER SIDE 

MERCHANDISE for PROFIT!

Quality... Product quality is still the most important selling aid in the book. We have been in the business of manufacturing quality tools since 1903. All Skokie products are made in this country from the highest quality steel, under a system of rigid quality controls, using the latest methods of precision manufacturing. In our business and in yours, quality means satisfied customers, and satisfied customers mean repeat sales.

Color... Since Skokie first introduced color to the replacement tool market, the use and development of color has helped increase our customers' sales for two reasons. First, color offers an additional selling feature by making it easy for the user to identify the size and use of each tool through a system of color coding. Second, a mass of vivid colors adds a totally new dimension of eye-catching beauty to the entire assortment of products. Color stimulates impulse buying by calling attention to itself.

Complete Line... A complete line of tools means economy and ease in buying from a single source. It means consistent quality, too. Most important, it means that your customers can depend on you (and Skokie) to provide them with the right tools at the right time and in the right place. Skokie offers the most comprehensive line of replacement tools available from any single source.

Packaging... The right kind of packaging has immeasurable sales value at the point of purchase. It "shows" . . . it "tells" . . . and it "sells" — three vital functions in today's self-service retail stores. Skokie skin-packs virtually sell on sight. Self-sell packs permit the purchase of any number and variety of individual replacement tools in single packages. And Skokie multi-packs help build volume by making it convenient for customers to buy several reserve replacement tools in one package, one purchase, at one time, and in one store.

New Products... We are constantly seeking new product improvements and developing fast-moving items for inclusion in our line. Look to Skokie for new products, new packaging, new merchandising assistance and new profit opportunities now and in the years ahead. Skokie helps you merchandise for profit.

Display... Skokie self-merchandising floor displays hold a complete stock . . . use up almost no floor space . . . practically hand the product to the customer and ring up big sales at the cash register. They provide tool departments with a fast turnover replacement tool center that more than pays for floor space. A big variety of Skokie displays are available FREE with initial assortment orders.

3 LINES OF SABRE SAW BLADES

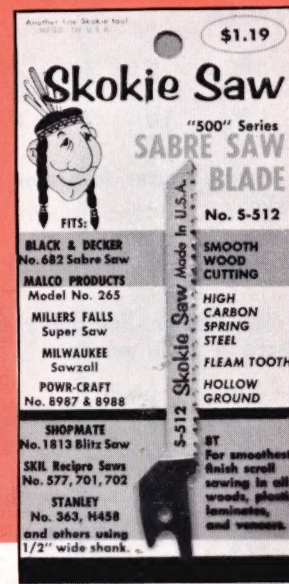

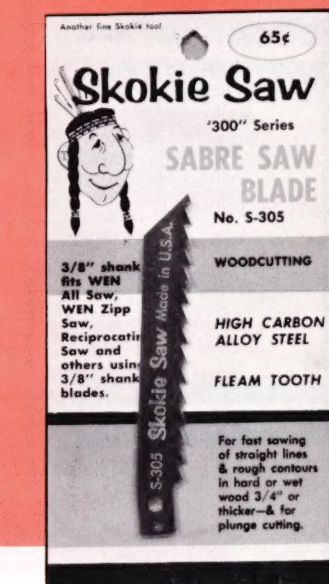

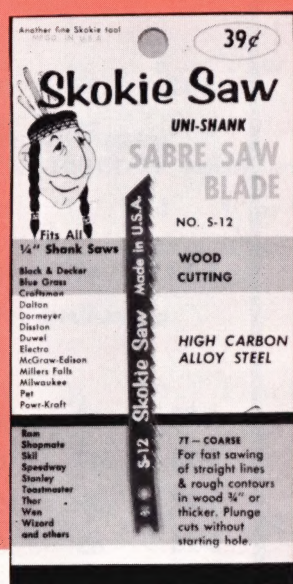

each one distinct, and each one complete—each one designed to fit and fully equip one of the 3 different major classes of Sabre Saws on the market today.

1  **"UNI-SHANK" SERIES**
fits saws using 1/4"
wide shank blades

2  **"300" SERIES**
fits saws using 3/8"
wide shank blades

3  **"500" SERIES**
fits saws using 1/2"
wide shank blades

Again, SKOKIE leads the industry in offering all three lines, individually skin-packed on eye-catching, informative cards for easy self-selling, so that you can ring up your full share of today's rapidly growing Sabre Saw replacement blade sales.

SKOKIE SELLS ON SIGHT!

Skokie®

SABRE SAW BLADES

the STEEL

HIGH CARBON ALLOY STEEL — for high performance at low cost in woodcutting applications.

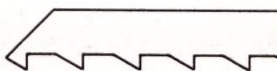

HIGH CHROME ALLOY STEEL — for the extra toughness and abrasion resistance needed by SKOKIE'S unique extra-fine scrollsawing blades.

HIGH SPEED STEEL — for the ultimate in abrasion resistance and edge-holding qualities. Heat treated to spring temper hardness, it provides the longest-life woodcutting blade possible. Heat treated to full hardness, it is the only steel capable of retaining its hardness and the sharpness of saw teeth in cutting ferrous metals at the high reciprocation speeds common to all sabre saw machines.

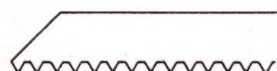

TOOTH design

REGULAR TOOTH — provides a chipping-type sawing action. Most effective in sawing pine and other soft woods and metalcutting.

SKIP TOOTH — a modified regular tooth with an extra-large gullet to provide the extra chip clearance necessary in sawing plywood and plastic.

V-TOOTH — saws on down stroke as well as up-stroke of saw. Provides a constant abrading action found to be most effective in sawing plaster, masonry, and high density plastic.

FLEAM TOOTH — a tooth sharpened with an alternating bevel. Always presents a point to the material being cut, rather than a full edge. Its shredding-type cutting action is most effective in sawing hard, green, or wet woods in which the fibers resist other types of cutting action.

tooth CLEARANCE

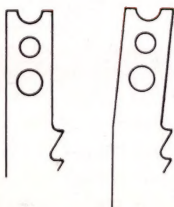

SET TOOTH — provides easiest and sharpest turning ability due to teeth projecting radically to either side of blade, thus providing the greatest amount of clearance between blade body and material being cut.

HOLLOW GROUND — sides of blade body are ground with a concave taper to provide clearance. No teeth project from body of blade, thus imparting absolutely smooth finish to material being cut.

SHANK design

CANTED SHANK — provides built-in blade relief (similar to the orbital action of some sabre saw machines) due to the fact that the cutting teeth disengage from the material being cut on each down stroke, thus helping to clear the saw dust and to cool the blade. On the up-stroke, the teeth again bite in, but at the increased angle furnished by the canting of the shank, thus increasing cutting speed. Canted shank blades, therefore, cut faster and last longer than other blades. However, due to the cant angle, these blades do not cut square with the work surface, and are only recommended for straight-line sawing (ripping or cross-cutting) or for rough contours.

STRAIGHT SHANK — are slower sawing than canted shank blades, but do cut square with the work surface, and should be used wherever scroll cuts with square edges are required.

DADO SETS

SKOKIE Dado Sets are precision woodworking tools designed for cutting grooves to specific dimensions with a single sawing operation. Manufactured from highest quality saw steel, precision ground, and hard chrome plated for longest life, they make possible the precise grooving necessary for all types of cabinetry work, thus turning bench and radial arms saws into professional cabinet-making equipment.

SKOKIE Dado Sets are furnished affixed to handsome, wood-grain storage boards, and are shipped in attractive gift-type boxes. Both storage boards and boxes are designed to be self-selling.

6" set — Includes two 1/8" blades, four 1/8" chippers, and one 1/16" chipper. Permits cutting of grooves from 1/8" to 13/16" wide.

8" set — Includes two 1/8" blades, and six 1/8" chippers. Permits cutting of grooves 1/8" to 1" wide.

Cat. No.	Size	Price	Master Pack

Skokie®

SILVER CHIEF CIRCULAR SAW BLADES

QUALITY! . . . It starts with the finest quality saw steel. It progresses through stages of quality craftsmanship, through modern Mar-temper (molten salt) heat treating and electronically controlled tempering, on to precision grinding.—This is quality in circular saw blades.

VALUE! . . . Not only to the ultimate consumer, but also to the equally important retailer. Possible through reduced inventory . . . made feasible by the Univers-Hole arbor! Just four sizes to fit almost all power saws made! Not only value, but the conservation of working capital. This is value in circular saw blades.

PRIDE! . . . That's what we feel over this top quality tool—so we outdid all competition in packaging, too! Twice the pride in our Duo-Pack . . . and internal skin-pack, to give an extra measure of see-through protection to the product that quality built . . . all this quality and value enveloped by a new, distinctive storage pack. This is pride in circular saw blades.

These are the advantages available to you when you switch to SKOKIE'S SILVER CHIEF, too—"so many have."

BLACK CHIEF FLINT TIP

CIRCULAR SAW BLADES

with the UNIVERS-HOLE Combination Arbor

**STILL
THE GREATEST
SAW BLADE BARGAIN
IN AMERICA**

High Carbon Special Cold Rolled Steel, with a surface smoother than that of any ground blade, heat treated without distortion for complete blade flatness (no need to grind flatness into the blade)—for freer, faster sawing.

Duo-Tempered BLACK CHIEF blades, unlike other hard tooth blades on the market, are initially hardened throughout to conventional saw hardness (40-44 "RC") to produce a blade free of wobble, a blade tough enough to support the FLINT-TIP hardened teeth throughout all the grueling sawing tortures to which they can be subjected—

Saw wet knots, imbedded nails—even non-ferrous and sheet metals!!

- Eye-Catching
- Self-Selling
- Instant Sales Appeal

**THE COMPLETE HARD-TOOTH CIRCULAR SAW BLADE LINE
A TOOTH STYLE FOR EVERY SAWING PROBLEM, YET—
DUE TO THE UNIVERS-HOLE COMBINATION ARBOR—
STOCK ONLY 24 ITEMS!!**

SKOKIE Abrasive Cut-Off Blades are manufactured from the finest electric furnace abrasive materials securely bonded with phenolic resin and reinforced with fiberglass for operator safety. As an added safety feature, steel inserts are used to reinforce the diamond arbor hole. Adaptor bushings are furnished with each blade to make the blades universally adaptable.

SKOKIE Abrasive Cut-Off Blades are furnished in two different basic types. Silicon Carbide Abrasive Blades are designed for cutting all Masonry objects, such as brick, concrete block, tile, and stone. Aluminum Oxide Abrasive Blades are designed to cut ferrous and non-ferrous Metal.

Users of Abrasive Cut-Off Blades should always be reminded not to use the blades at speeds exceeding that printed on the blade blotter, and always to be sure to use proper safety guards.

SKOKIE Hacks are good. They're the best. Our unique edge-hardening furnaces have made them the best. SKOKIE Alloy Steel Hacks, in fact, frequently out-cut our competitors' High Speed Steel Blades. But that's not enough. SKOKIE Hacks are made to sell, so we also made them easier to sell—with the aid of brilliant flashing colors to identify the two grades of steel and four different tooth sizes. A different color for each cutting application. Strictly functional—but don't forget the basic sales appeal of color. Helps stimulate the customer's desire for additional blades. And don't forget the bigger, more profitable sales made possible by skin-packing two, three, and four blades per card. SKOKIE thinks of the customer—and the retailer, too.

SKOKIE SELLS ON SIGHT!

HAND HACK SAW BLADES

Molybdenum High Speed Steel—Spring Flex Back

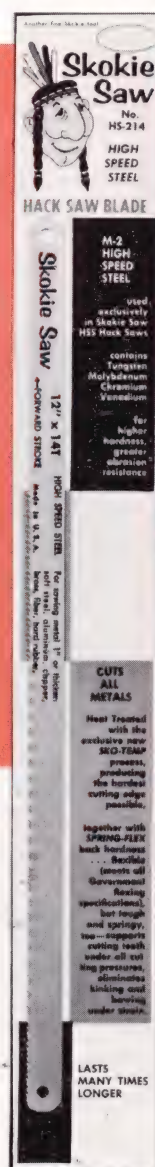

HEAT TREATED with the exclusive new **SKO-TEMP** process, producing the hardest cutting edge possible, together with **SPRING-FLEX** back hardness . . . flexible (meets all government flexing specifications) but tough and springy, too—supports cutting teeth under all cutting pressures, eliminates kinking and bowing under strain.

M-2 HIGH SPEED STEEL used exclusively in Skokie Saw HSS Hack Saws contains Tungsten, Molybdenum, Chromium and Vanadium for higher hardness, greater abrasion resistance.

"I can buy imports a lot cheaper." Sure you can. Go ahead. Buy them. God bless you. But are you, at the same time, buying customer confidence in quality? Aha! Let me tell you, friend, Gold Bits were never intended to compete with cheap, imported drills. That's why we elected to offer to the consumer the kind of quality generally intended only for the industrial trades—the guys who need precision. You know, High Speed Steel. But with a difference.

We take our drills, and after doing everything that everyone else does to them — and more — we take our drills and temper them in an atmosphere of inert gases under pressure . . . to toughen them — to toughen the whole drill — to make the cutting edges more invulnerable to chipping and wear, to make the body much less susceptible to fracture . . . Who else does it? Nobody — nobody that we've ever heard of. Why not? It costs money . . . takes expensive equipment . . . and know-how. Not many people are willing to put that much extra into a drill bit—or able. But SKOKIE is. SKOKIE does.

EXO-THERM TEMPERED
for maximum toughness,
longer cutting life.

Gold for show? Not on your sweet life. This color has a purpose in life . . . it's really a by-product of creating a drill surface that encourages faster, easier chip clearance. It gives your drill longer life — But . . . it is beautiful, isn't it?

Carbide Tipped MASONRY DRILLS

SKOKIE Carbide Tipped Masonry Drills are produced from the finest grade of carbide—the hardest metal made—permanently brazed to highest quality steel shanks, and are designed for drilling in all sorts of abrasive materials such as brick, concrete, plaster, metal lath, and tile. SKOKIE Masonry Drills are available both in the economical Rolled Flute design, in three and four inch lengths, and in the Milled Flute design, in the six inch length. The Milled Flute drills are recommended where the drilling of deeper holes or damp material is involved.

FILE GLOSSARY

Bastard Cut—Standard cut or tooth size, with teeth coarse enough to facilitate fast stock removal or cutting.

Second Cut—Medium sized teeth or cut for moderate rate of stock removal.

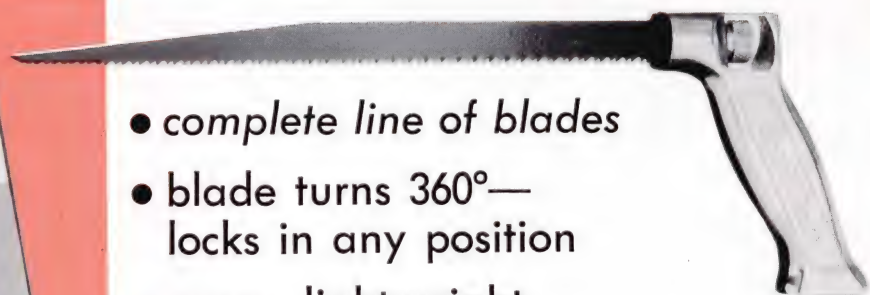

Single Cut—A single series of parallel, equally spaced cuts or teeth.

Double Cut—Two series of cuts or teeth, with the two series crossing each other so as to form many small points or individual teeth.

PRUNING SAWS

POLE PRUNING SAW 14" Blade

- **NEEDLE SHARP TEETH**
- **CHROME PLATED**
- **LIGHT WEIGHT HANDLE**
- **LIGHT, INSULATED POLES**

The SKOKIE Pole Pruning Saw provides professional nurserymen and homeowners, alike, with the ultimate in a high quality, light weight, low cost tool for pruning hard-to-reach tree limbs. The blade is one that could only be produced in a land of highly skilled hand craftsmen, such as Norway, for the details of design are such as to defy sophisticated American mass production techniques. The blade is curved and has special deep, hook teeth, filed to needle sharp points, to make the strenuous job of pole pruning as easy as possible. The blade is further improved by impregnation with hard chrome to help prolong cutting edge sharpness and to prevent rust. The handle is made of a newly developed high impact strength plastic for the light weight/high strength combination needed in a pole pruner. The material is bright yellow for easy spotting aloft among tree branches, has a hook for dislodging cut limbs, and may be used with or without extension poles. The extension poles are made of extra-light aluminum tubing, and are available in four-foot lengths, both plain and with vinyl insulation for work near power lines. The strength of the poles is such that four or five poles may be easily joined together for reaching very hard-to-get-at branches.

PRUNING SAW 21" Blade

The SKOKIE 21" Pruning Saw offers the same professional quality features as the larger SKOKIE Bow Saws, including chrome plated, sturdy tubular frame, special Swedish Steel Raker Tooth Blade, and blade tension screw. In addition, it provides a rubber, hand-contour grip that facilitates one hand sawing.

BOW SAWS

Professional Quality

Cat. No.	Price	Master Pack	Description
PS-510	\$4.75	5	30" Bow Saw
PS-513	1.59	10	30" Replacement Blade
PS-514	4.98	5	36" Bow Saw
PS-516	1.89	10	36" Replacement Blade

SKOKIE Bow Saws have all the finest qualities demanded by the professional tradesmen and preferred by the home craftsman.

- Sturdy, heavy-gauge round tube frame construction
- Heavy-duty tension screw and wing nut for easy blade changing and proper blade tension. Correct blade tension means faster cutting.
- Extra-heavy chrome-nickel plating for rust prevention — and greater sales appeal
- Finest quality Swedish steel blades made by Norwegian craftsmen—unsurpassed for quality of product in every respect. Superb, freest cutting raker tooth design. Absolutely the best product of its kind on the market.
- Individually packaged for protection in shipment and storage
